

SABERTOOTH CRAMPON & TOURING BRACKET REPLACEMENT PROGRAM

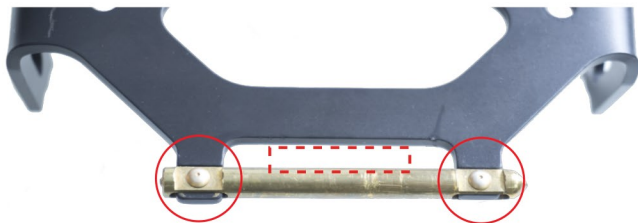

At Spark R&D we're always working on ways to improve our products, and your time in the backcountry. We've gone through a number of versions of crampons and touring brackets since first introducing our Tesla bindings for the 2013/14 season. Our latest versions are a significant improvement over the initial versions we've released, so we are replacing the older ones for free. Check your crampons and brackets against the images below. If either are eligible for replacement please follow the return information at the bottom.

NOTE: Touring function remains constant for all bracket versions, only the crampon claw interface has been updated. Sabertooth users who have V1 or V2 brackets are eligible for replacement brackets. Users must currently own crampons to be eligible for replacement brackets.

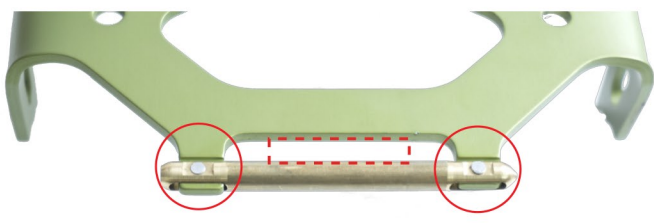

Crampons **Eligible** for Replacement

Crampon Version 1

Large brass rivets, no center tab - Will be replaced with V4 Crampons.

Crampon Version 2

Smaller aluminum rivets, no center tab - Will be replaced with V4 Crampons.

Current and Upcoming Version **Not Eligible** for Replacement

Crampon Version 3

Added center tab, 2014/15 version.

Crampon Version 4

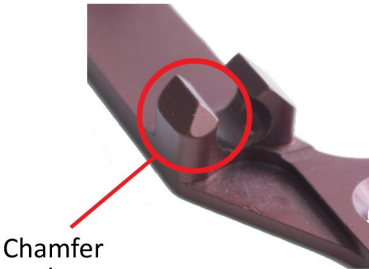

Center tab remains with addition of two more rivets. Upcoming 2015/16 version.

Bracket replacement identification guide for all crampon users

Brackets **Eligible** for Replacement

Brackets Version 1&2

Chamfer edge

Chamfers are on outside edges of crampon claws.

Will be replaced with V4 brackets for anyone using crampons. 2013/14 version.

Current and Upcoming Version **Not Eligible** for Replacement

Brackets Version 3

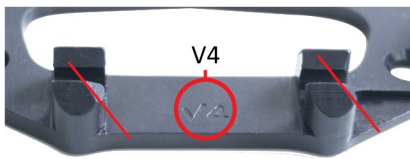

Chamfers are on right edges of crampon claws. No replacement necessary. 2014/15 version.

Brackets Version 4

Thicker crampon claw

Chamfers are on the right edges of crampon claws.

V4 brackets have thicker crampon claws and a steeper installation angle. Upcoming 2015/16 version.
